

GOLIGHT™ INC.

GOLIGHT... BRINGING MORE LIGHT TO YOU

Whether it's a snowy roadside emergency, a rainy late-night repair or just a moonless night on the lake, power is the first priority in portable lighting. At Golight we're committed to continually developing and testing new bulb and reflective technologies that produce brighter, more powerful light sources.

Golight's Cr5 PentaBeam Technology applies its powerful 400,000 candlepower

light source to a unique beam pattern, designed for both close and distant usage. Its powerful center beam projects up to one half mile, while the short-range pattern brightens a broad area with consistent light. The engineering behind our Cr-5 PentaBeam Technology takes full advantage of an extraordinarily powerful light source... bringing more power to you, anywhere you go.

GOLIGHT

Model 5149(Black), 5167(White)

Remote Controlled Portable Search Light

Package includes:

- *Wired Remote Control · Suction Cup, Permanent Mount Shoe*
- *Amber Snap-on Lens · Heavy Nylon Carrying Case*

RADIORAY

Model 7901(White), 7951(Black)

Wireless Remote Controlled Portable Search Light

Package includes:

- *Programmable, Wireless Remote*
- *Suction Cup, Magnetic Mount Shoe · Amber Snap-on Lens*
- *Heavy Nylon Carrying Case*

VERSATILE

GOLIGHT... COVERING ALL THE ANGLES

GOLIGHT's patented designs reflect the thousands of uses and applications for portable lighting. Our foremost concern is designing units that adapt to any situation. That's why all our units combine 370° rotation with 120 tilt-creating a sphere of coverage that reaches the most extreme angles.

GOLIGHT's three remote controls give precision control from almost anywhere — inside a squad car, atop a boom truck or from your own backyard. The mounting options, permanent or temporary, are designed for versatility. You can depend on GOLIGHT to cover all the angles of your lighting needs.

DURABLE

GOLIGHT... WEATHERING THE STORMS

In some cases it's rain and sand that challenge our products; other times it's snow and frigid temperatures. Whatever nature throws at a GOLIGHT, you can depend on its high quality, construction and materials.

Every aspect of the GOLIGHT is designed for durability and strength. The highest quality UV materials are implemented into our impact resistant casing to protect from cracking, warping and discoloration. The vital mechanisms of each GOLIGHT are sealed from exposure to rain, snow and dirt ensuring that your GOLIGHT is ready to weather any storm you can take it through.

All GOLIGHT's share the same rugged construction and design that have made them a favorite in the industrial, utility and marine industries.

READY TO GO

- Weather resistant seal prevents water, sand and other particles from damaging critical internal mechanics.
- Highest quality UV materials show no sign of yellowing or deterioration.
- High-impact outer casing protects the entire unit from unexpected blows.
